Plants & Nature Picture Learning

A Colourful Picture Book for Little Learners

Ages 2–6

By Uncle Sam

Discover • Learn • Explore

Welcome Little Explorer!

Plants are all around us, from tiny seeds to tall trees. Discover colourful flowers, different leaves, and the fruits and vegetables we eat.

Look at each picture, learn new words, and explore simple ways to care for plants.

A note for grown-ups:

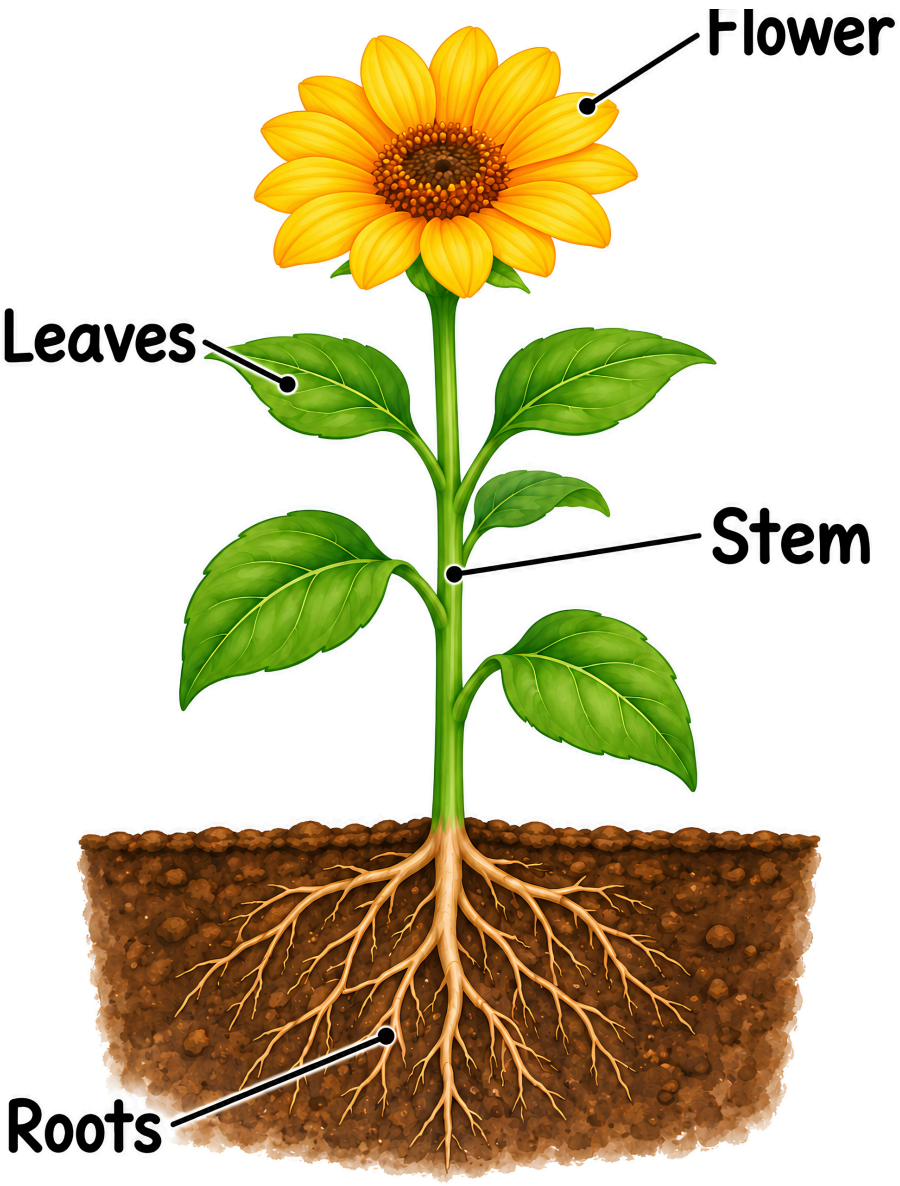
Read each page aloud. Help your child name the plants and talk about their colours, shapes, and sizes.

Seeds Around Us

Bean Maize Sunflower

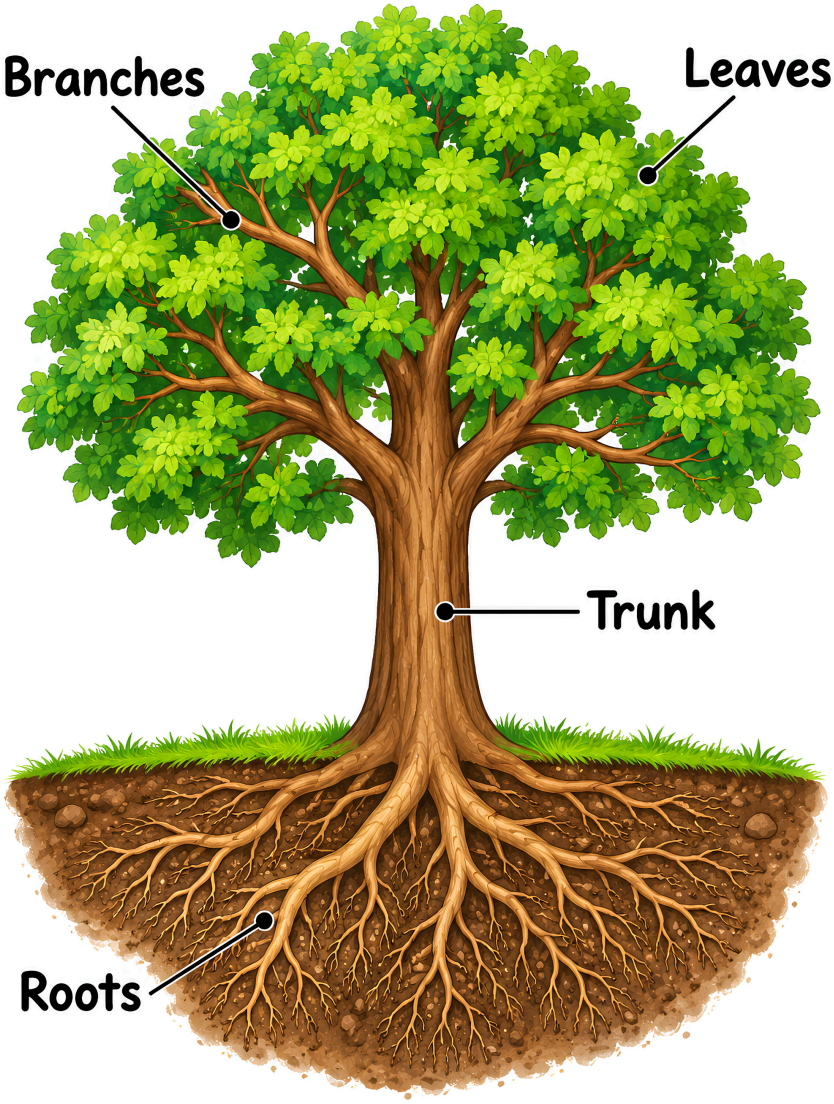
Bean, maize, and sunflower seeds have different shapes and sizes. With water, air, and enough warmth, they can sprout into new plants.

Parts of a Plant



Roots take in water, and the stem holds the plant up. Leaves use sunlight to make food, while flowers help make seeds.

Parts of a Tree



A tree’s strong trunk holds up its branches and leaves. Its roots take in water from the soil and help the tree stand firmly.

Flowers Around Us

Sunflower Hibiscus Rose

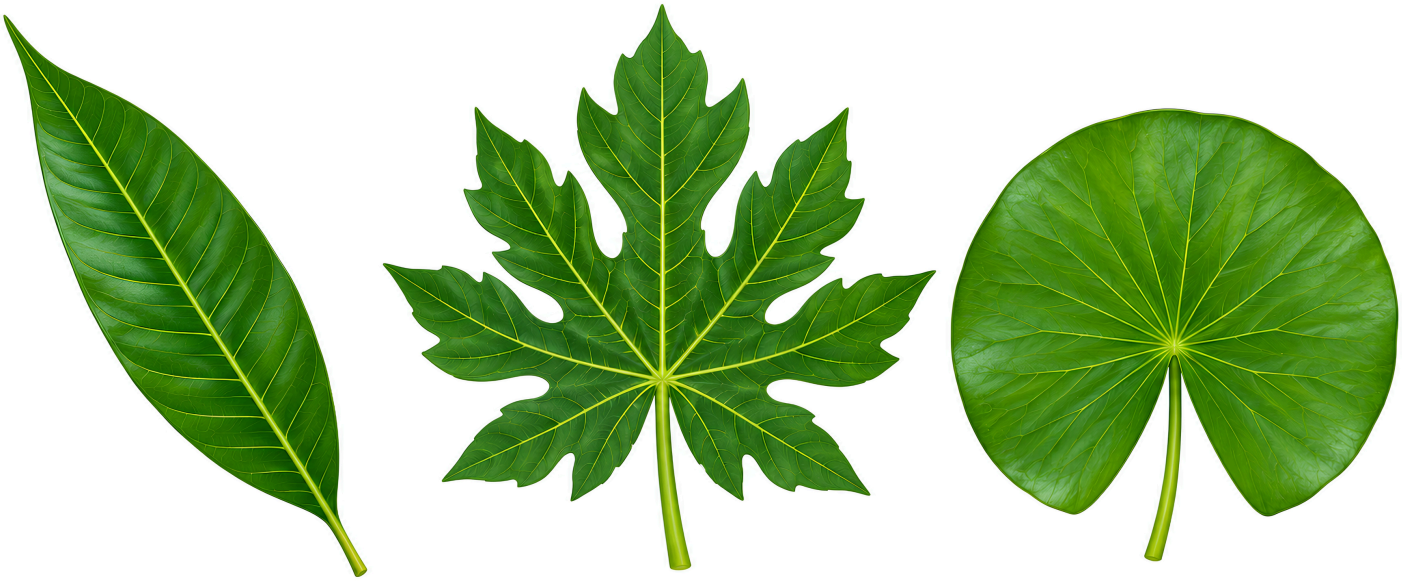
Sunflowers, hibiscus flowers, and roses have different petals and colours. Many flowers attract bees and butterflies that help plants make seeds.

Grass, Clover & Ferns

Grass Clover Fern

Grass has long, thin leaves, and clover has small, round flower heads. This fern’s young leaves slowly uncurl as they grow.

Different Kinds of Leaves



Mango Papaya Water lily

Mango leaves are long and narrow, while papaya leaves spread out like fingers. Water lily leaves are round and float on the water.

Caring for Plants

Water the soil

Be gentle

We can help plants by watering the soil around their roots. Gentle hands protect their leaves, stems, and flowers while we care for them.

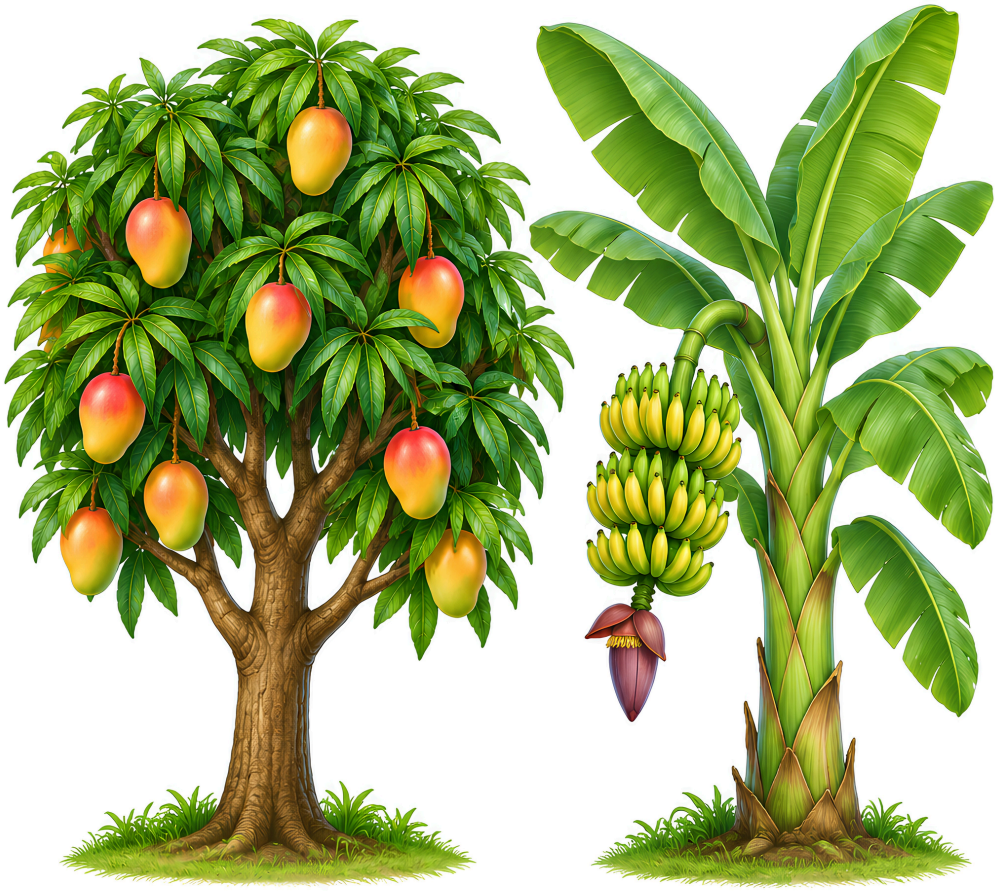
Plants Give Food & Shelter

Food

Shelter

Plants give many animals food and shelter. Rabbits nibble grass, and birds can build nests in trees to care for their eggs and chicks.

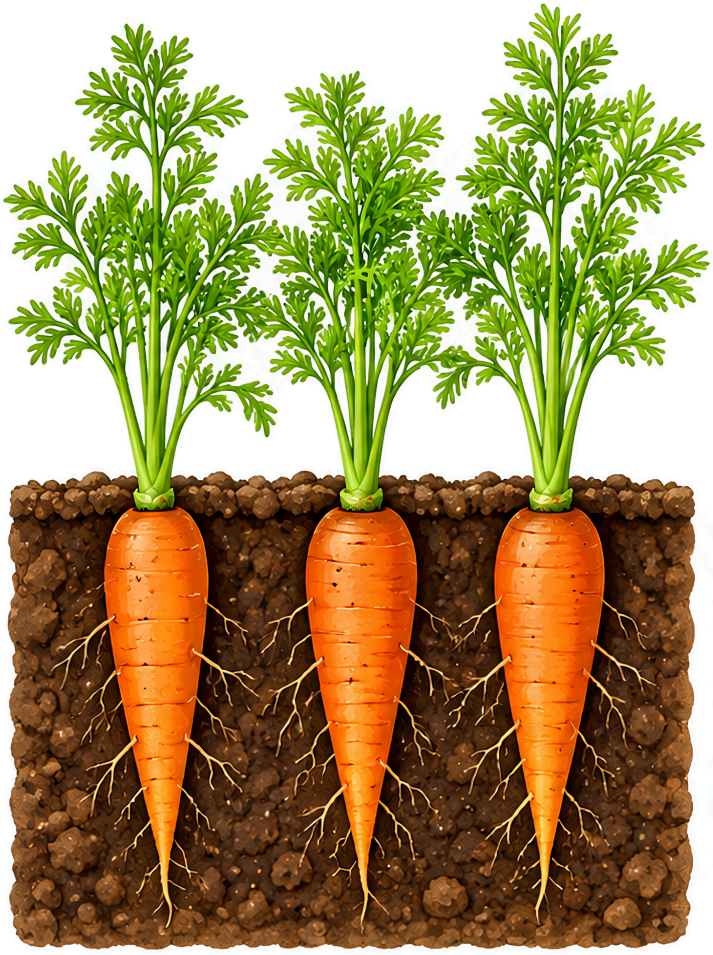
Where Fruits Grow



Mango tree Banana plant

Mangoes grow on the branches of a mango tree. Bananas grow together in large bunches on a banana plant with wide green leaves.

Where Vegetables Grow



Carrots

Cabbage

A carrot’s thick root grows under the soil. A cabbage grows above the ground, with layers of leaves packed together into a round head.

Discover the plants around you!

From leafy trees to colourful flowers, explore plants through bright pictures and simple sentences.

Learn about seeds, roots, fruits, and vegetables, and discover how plants give animals food and shelter.

Look closely, learn new words, and enjoy exploring together!
